

October 4, 2024

To Whom It May Concern,

This letter confirms that Perkins Eastman purchased 1,209 mT of carbon offsets on June 4, 2024, to offset the organization's 2023 operational Scope 1 & 2 emissions.

Cloverly acted as Perkins Eastman's carbon offset partner. Cloverly leverages in-house carbon science expertise to thoroughly evaluate carbon credit projects for key quality characteristics including additionality, permanence, leakage and carbon accounting. Only 5% of carbon credits available in the Voluntary Carbon Market meet Cloverly's high quality standards.

Cloverly designed and purchased a customized portfolio of carbon credit projects that passed Cloverly's high quality evaluation criteria for Perkins Eastman.

The Perkins Eastman carbon credit portfolio consisted of:

- 36 mT CO2 Utilization in Concrete (VCS3207)
- 597 mT Advanced Refrigeration (ARS2019001)
- 400 mT Bukaleba Forest Project (VCS799)
- 140 mT Buena Vista Heights Conservation Area (CFC - Buena Vista)
- 36 mT Indian Carboneers (CC-001)

Each carbon credit was retired on its corresponding carbon credit registry, naming Perkins Eastman as the emissions reduction claimant. A Certificate of Purchase for each carbon credit purchase is included.

By purchasing 1,209 metric tons (mT) of high quality carbon credits, equivalent to Perkins Eastman's 2023 Scope 1 & 2 emissions, Perkins Eastman effectively obtained operational carbon neutrality in 2023.

Sincerely,

A handwritten signature in black ink that reads "Christie Gamble". The signature is written in a cursive, flowing style.
